

# Linking files

## Linking to a file in the same folder

If the two files are in the same folder than file 1 can call file 2 by the file name only.

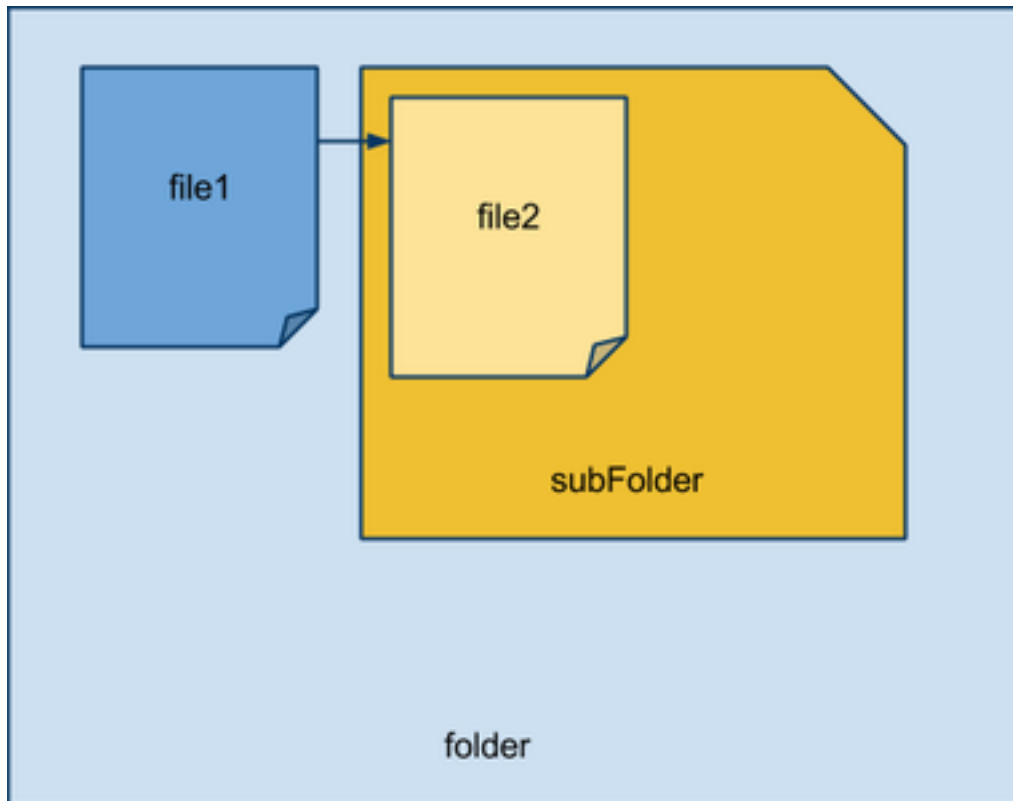

### Example

- `<a href="file2.html">link</a>`
- ``

## Linking to a file in a sub folder

If the file you wish to link to is a sub folder you can not link to the file directly. Instead you need declare the folder name and the file name.

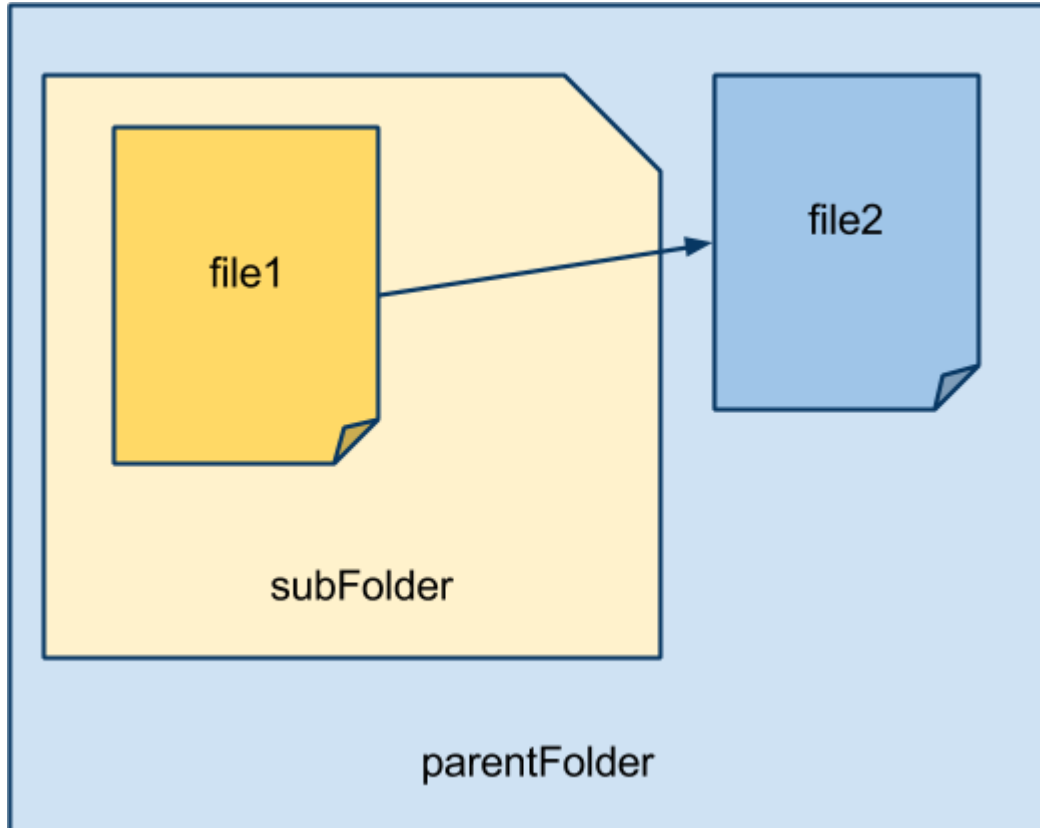

When linking to a file in a sub folder you need to know the folder name. Because it possible to have more than one sub folder it is necessary to know the folder name.

### Example

- `<a href="subFolder/file2.html">link</a>`
- ``

## Linking to a file in a parent folder

When linking to a file that is in a parent folder (up a directory) you need to indicate that you are going up a directory. This is done by adding a “../” for every folder that you want to go up.

### Example

- `<a href="../file2.html">link</a>`
- ``
